a substance that can act as either an acid or base (ex. water). An amino acid has a basic amine group and an acidic carboxylic acid group, so it is also amphoteric. Unlike water, amino acids can carry multiple charges depending on their environment. At pH 7, most amino acids have a protonated amine group and a deprotonated carboxylic acid group.

This study material consists of NCERT solutions class 7 Science Chapter 5 Acids, Bases and Salts and will help you in your exam preparation. After studying this study material you will be able to learn basic concepts involved in acids, bases and salts.

NCERT Solutions Class 7 Science Chapter 5 Acid Base and ...

Neutralisation. Acids and bases are chemically opposite substances. So, when an acid is mixed with a base, they neutralise (or cancel) the effect of each other. When an acid solution and a base solution are mixed in suitable amounts, both the acidic nature of the acid and the basic nature of the base are destroyed.

Dilution of Acid and Base: The concentration of hydrogen ion in an acid and hydroxide ion in a base, per unit volume, shows the concentration of acid or base. By mixing of acid to water, the concentration of hydrogen ion per unit volume decreases. Similarly, by addition of base to water, the concentration of hydroxide ion per unit volume decreases.
