Monte Carlo methods are often used when simulating physical and mathematical systems. Because of their reliance on repeated computation and random or pseudo-random numbers, Monte Carlo methods are most suited to calculation by a computer. Monte Carlo methods tend to be used when it is infeasible or impossible to compute an exact result with a ...

Monte Carlo Simulations is a free software which uses Monte Carlo method (PERT based) to compute a project's time. You can add various activities and then estimate project time. To add activities, you can enter description, precedences, distributions (Uniform, Triangular, Beta, Gaussian, and Exponential), parameters, and critical path node. To run calculation, you can specify number of ...
