Practical Data Analysis and Reporting with BIRT eBook by ...

Simply put, reporting uses data to track the performance of your business, while an analysis uses data to answer strategic questions about your business. Though they are distinct, reporting and analysis rely on each other. Reporting sheds light on what questions to ask, and an analysis attempts to answer those questions.

The Difference Between Data Reporting and Analysis and Why ...

"Data analysis is the process of bringing order, structure and meaning to the mass of collected data. It is a messy, ambiguous, time-consuming, creative, and fascinating process. It does not proceed in a linear fashion; it is not neat. Qualitative data analysis is a search for general statements about relationships among categories of data."

DATA ANALYSIS, INTERPRETATION AND PRESENTATION

Data can also be collected in forms other than numbers, and turned into quantitative data for analysis. Researchers can count the number of times an event is documented in interviews or records, for instance, or assign numbers to the levels of intensity of an observed event or behavior.

Section 5. Collecting and Analyzing Data

Here are five differences between reporting and analysis: 1. Purpose. Reporting helps companies monitor their data even before digital technology boomed. Various organizations have been dependent on the information it brings to their business, as reporting extracts that and makes it easier to understand. Analysis interprets data at a deeper level.
