and will raise queen cells on the only viable brood, the comb with eggs. Stage 4. 4 days later (total 11 days) (necessary if an ordinary brood comb with some older brood is brought from the breeder)

1. In the cell raiser check the breeder comb for queen cells. Destroy any that are already sealed.
2. Check there are enough bees in the hive to one side.

Simple Queen Rearing - honey, bee

Bee breeding and queen rearing are not the same, but many beekeepers think they are. Queen rearing is the process of producing queen honey bees by whatever method is chosen by the beekeeper, whereas breeding is the process of selection that brings about the lines to be propagated by queen rearing and any culling that is carried out.

Bee Breeding Methods & Techniques - Dave Cushman

Insert the (now ripe) queen cells into nucs—push the plastic cup gently into the wax such that the cell hangs over brood, cell cup up, cell hanging down vertically. In cold weather, cells must be placed in contact with brood in the center of the cluster or the bees may let them chill. Queens usually emerge on day 12, but may start today.

□The queen honey bee is an egg layer. Queens, workers, and drones all come from the eggs laid by the queen. A mated queen fertilizes eggs which result in production of eggs which produce worker bees or other queens. Unfertilized eggs produce drones.

A Queen Manual - Ohio State Beekeepers

Once the queen is found, place her and a frame of brood covered with bees in an empty brood chamber. Next create a cell builder chamber by placing the rearing frame in the middle and work towards the outside placing frames of eggs, pollen, brood, and honey in that order.

Small Scale Queen Rearing | BeeVac.com

To induce queen rearing, you must first remove the queen in the chosen strong colony. Remove her and one frame of capped brood covered with bees. Place this frame into a colony for making a nucleus. If you have a second strong colony, it is best to shake the bees off another frame of capped brood and add this to the nucleus colony you will make.

Raising a Few Queens for Your Own Use - American Bee Journal

As a beekeeper the one of the greatest rewards is raising your own queen bees. Having the ability to graft 4 day old larva straight from the comb into a cell cup takes practice to be successful....

Raising Queen Bees / Queen Rearing / Grafting Queen Bees

Basically to cash in on the benefits of not treating, you need to be rearing your own queens. Quality. Nothing is more important to success in beekeeping than the queen. The quality of your queens can often surpass that of a queen breeder.

My goal is to provide the tools, training and services required to select and maintain honey bee stocks with the desired, heritable traits to enhance their vigor and productivity. This also requires advanced beekeeping skills, the rearing and care of queens and drones.

Honey Bee Insemination Services - Honey Bees, Bee Breeding

Rearing bees is not the same as breeding bees. Rearing bees is about queen rearing and colony division. Queen rearing is the process of developing a new queen at the choice of the beekeeper rather than allowing this to be the choice of the bees. The beekeeper may want more queens;

Bees for development | Rearing and breeding bees

Mating Hives Small hives with just a cup-full of bees are used as mating hives. The queen doesn't mate in them; the small number of bees is just enough to look after her and once the queen has matured and flies from the small colony to mate on the wing, she will start to lay eggs in these small hives.
